

STEPHEN "CHRIS" HULL

c.hullse@protonmail.com · (813) 480-6407 · <https://www.linkedin.com/in/stephen-chris-hull>
Staff Software Engineer | Distributed Systems | Edge & Embedded AI | Cloud & ML Platforms

Staff Software Engineer with 14+ years of experience designing and leading production platforms spanning distributed systems, cloud infrastructure, edge computing, IoT, and machine learning. Proven track record setting technical direction, leading cross-functional architecture, and translating complex engineering challenges into measurable business outcomes, including \$120K+ in annual cloud savings and an 80% reduction in latency. Deep experience with Kubernetes, Kafka, gRPC, AWS/GCP, NVIDIA Jetson, and real-time computer vision systems.

EXPERIENCE

ACV Auctions

Buffalo, NY (Remote)

Staff Software Engineer - Research & Development

May 2022 - Present

- Architected and deployed a high-performance ML platform on GCP GKE with GPU time-sharing, gRPC microservices, Envoy, and Apache Kafka, serving 15+ models and 198K+ monthly requests. Reduced annual cloud costs by \$120K+ and improved response latency by 80%, delivering enterprise-grade scalability and performance.
- Served as technical lead and primary architect for a production edge-to-cloud vehicle inspection platform spanning NVIDIA Jetson, Raspberry Pi, AWS IoT Core, Kafka, S3, FastAPI, PostgreSQL, and ML services, providing architectural direction across embedded, cloud, and machine-learning teams.
- Led observability standardization across 30+ production services, defining reusable logging, metrics, alerting, and Helm-based monitoring patterns while migrating teams from Splunk/New Relic to Datadog.
- Led technical development of ACV One, integrating mobile/web applications with edge hardware, real-time inspection data, and ML-powered condition analysis to provide a unified vehicle-inspection experience.
- Established reference architectures and reusable GitHub templates for Python/FastAPI services, ML deployments, and Kafka consumers, standardizing CI/CD, observability, and service conventions across new projects.

Schellman & Company, LLC

Tampa, FL (Remote)

Manager of Application Development

September 2021 - April 2022

- Drove platform architecture and technology-selection decisions across application, infrastructure, identity, observability, and data concerns, aligning engineering investments with long-term modernization goals.
- Established architectural review and engineering practices that improved consistency across application development, QA, and platform delivery.
- Built and mentored a multidisciplinary engineering team, establishing technical mentorship and development practices that improved team capability and long-term ownership.

Senior Software Engineer

November 2019 - September 2021

- Defined a modernization roadmap for the AuditSource platform, evaluating and recommending strategic migrations across storage, identity, observability, and persistence, including Box → S3, Keycloak → Okta, Splunk/New Relic/Sentry → Datadog, and MySQL → Aurora.
- Architected enterprise data integrations connecting AuditSource, Quickbase, Workday, and Box with Snowflake and AWS Redshift, establishing a scalable foundation for cross-system reporting and analytics.
- Raised engineering quality standards by introducing automated testing, schema management, and static analysis using Selenium, Robot Framework, Cypress, Liquibase, and SonarQube.
- Owned core platform architecture spanning Spring Boot services, Angular applications, enterprise identity, AWS EKS, and production observability, providing technical guidance across application and infrastructure concerns.

JP Morgan Chase & Company
Software Engineer

Tampa, FL
August 2019 - November 2019

- Engineered critical features for a high-volume real-time payments system with Java Spring Boot, Apache Kafka, and MySQL. Architected a proof-of-concept cloud migration from Linux VMs to Pivotal Cloud Foundry.
- Led migration of enterprise Java applications from IBM WebSphere environments to Linux VM infrastructure, supporting platform modernization and improved deployment flexibility.

General Motors
Software Development Lead

Austin, TX
June 2016 - August 2019

- Set technical direction and architecture for modernization of the vehicle-signing platform, leading decomposition of a monolithic service into scalable Spring Boot microservices using Kafka and PostgreSQL while establishing engineering standards across security, testing, database change management, and deployment.
- Provided architectural leadership across cross-functional engineering teams, establishing reusable practices for Vault-based secrets management, automated testing, code quality, schema management, and Cloud Foundry deployments.
- Led migration from Oracle RDBMS to PostgreSQL and standardized database deployments through Liquibase and Jenkins CI/CD, reducing manual deployment dependencies and improving repeatability across environments.

Best Bass Gear, LLC (bestbassgear.com)
Software Developer

Tampa, FL (Remote)
August 2012 - May 2016

- Led migration of the 3dCart eCommerce platform to Magento, designing a new product catalog taxonomy and hierarchy. Optimized content and digital assets while preserving 95%+ of SEO rankings.
- Produced technical documentation, wiring diagrams, implementation guides, and instructional articles, leveraging Google Analytics to measure engagement and improve the effectiveness of technical content and knowledge-sharing resources.

TECHNICAL SKILLS

Languages	Java, Python, JavaScript/TypeScript
Distributed Systems	Microservices, Event-Driven Architecture, Kafka, RabbitMQ, REST, gRPC
Frameworks	Spring/Spring Boot, FastAPI, Django, Angular, React Native
Cloud & Platform	AWS (EC2, S3, IoT Core, EKS, RDS), Google Cloud (GKE, GPU Time-Sharing), Kubernetes, Docker, Helm, Terraform
Edge & Embedded	NVIDIA Jetson, Raspberry Pi, Linux, GStreamer, V4L2, CUDA/NVIDIA Multimedia
ML & Vision	Computer Vision, YOLO/YOLOX, GPU Inference
Data	PostgreSQL, MySQL, Redis, Oracle RDBMS
Observability & DevOps	Datadog, Splunk, Jenkins, GitHub/GitLab, SonarQube, Sentry, New Relic

EDUCATION

University of South Florida	Tampa, Florida
B.S in Computer Science - Cum Laude <i>GPA: 3.63</i>	- May 2016

PATENTS

- Systems & Techniques For Vehicle Inspection & Condition Analysis
 - U.S Patent No. 12,597,115 (US-12597115-B2)
 - Patent Publications: US-20260063564-A1, US-20260063565-A1
